Snapshot: 3 Key Benefits to Online Classes in Photography Even though photography is by nature a hands-on activity, it's also well-suited to online study. Myriad course options let students focus their interests, whether it be on a specific technical skill or a type of photography, and specialize to a degree that traditional classes might not support. The online format also is ideal for letting students learn a technique and then practice it on their own time. Following are the three top reasons for taking an online photography course. 1. Increase technical knowledge of modern photographic techniques Especially with the advent of digital photography, the technical skills and knowledge used in photography are ever-changing. Students who take online photography classes can learn how to use the latest technologies, as well as how to apply existing skills in new formats. In addition, taking these courses gives students access to experts who can assess their progress and give them suggestions on how to improve. 2. Sharpen artistic eye Photography skills are just the first step to taking great photos. Students also must be able to use their fundamental knowledge in an artistic way. Online courses are tailor-made for visual instruction, and can offer access to numerous resources that let students hone their creative visions. 3. Look beyond the familiar to find inspiration An online classroom is not limited by geography. Although any photography class will involve working with instructors and other students, individuals who take online photography courses are often exposed to a broader array of studentsâ€”not all of whom are headed to the same state park every weekend. A greater diversity of subject matter and approaches can foster experimentation in photography techniques, locations, and subjects. Professional Advice for Taking Online Photography Courses From Peggy Farren Most photographers struggle for years because so many classes focus on the creative and fun parts of photography. We have those fun classes too, but first we have a four-week program that gives beginner/intermediate photographers a solid foundation in the concepts and technical side of photography. That sets students up for success and confidence to experiment in lighting, exposure and composition techniques. Once you have a good grip on the technical part of photography, it becomes really fun. It's actually easier to teach photographers with no experience. More experienced photographers often have bad habits, or they think they understand something but have it wrong. Since we baby-step people through the online course, beginners race ahead with their comprehension. You can learn pretty much any photography concept online. Learning online gives you so much more time, and a lot more support from your instructor. I believe you can become an advanced photographer through online courses, as long as you do the homework and apply the lessons, especially when you are first starting out. Our homework and exercises are designed to help students understand one concept at a time. Every time a student picks up a camera, they can apply what they've learned. Our four-week course is structured with a live class each week, homework, support, and daily reminders to keep the students learning.
